

## Solar Electric Light Fund

November 16, 2011

Dear Friend,

We are delighted to share with you SELF's 2010 Annual Report. Through your support, SELF completed solar installation projects throughout Africa, such as the electrification of the Kisaruni Girls Secondary School in Kenya and multiple health clinics in Rwanda and Lesotho, and in Haiti through the Rebuilding Haiti Initiative, designed to provide solar power to health facilities throughout the country in conjunction with Partners In Health. We're also proud to report that our Solar Market Gardens in Benin were validated by Stanford University, and the results were published in the *Proceedings of the National Academy of Sciences*.

We couldn't have done any of this without you. These projects have helped to empower those in these regions to improve their health, education, economic development, and food and water security. On behalf of the entire SELF team, and especially those we serve, we extend our warmest thanks and gratitude.

Regards,

The SELF Team
