2020 CFEBA Fundraising Campaign

This year CFEBA has the special opportunity to drastically improve the lives of the Yurok Tribe, the largest federally recognized Indian Tribe in California, in its efforts to build a micro-grid that would allow the Tribe to maintain critical services and operations during extended power outages and emergencies.

For more than twenty-six years, the Yurok Tribe has been working to provide basic energy services to Tribal members. Because of the remote location of the Reservation, grid electricity remains unavailable to over 40% of the residents living on the Upper Reservation, where the micro-grid will be located.

Lack of access to reliable, affordable energy services is severely impeding economic development. Most of these residents get their electricity from gas or diesel-powered generators, which pose health risks for residents, pollute the environment, and cost up to four times more than conventional grid electricity. The majority of the Reservation’s residents, also lack phone and cell phone service and roughly 40% of the families are living below the federal poverty level.

The Tribe has adopted a three-phase plan to create a micro-grid at its Tulley Creek Complex, which includes critical infrastructure such as a wildland fire center and emergency services office. The Tulley Creek Complex faces increasingly frequent and lengthy service interruptions due largely to wildfire risk.

This project will facilitate phase two of the Tribe’s micro-grid plan, the installation of a 24 kW photovoltaic system on the rooftop of the Tulley Creek Wildland Fire Center, which is a necessary component of the Tribe’s micro-grid. Phase one was completed in December and the Tribe has now applied to FEMA for a grant to complete phase three of the micro-grid project.

We need your help! Please see inside for sponsorship opportunities.

Why you should support the CFEBA

The Charitable Foundation of the Energy Bar Association (CFEBA) is a non-profit charitable organization that has a unique mission of providing donations for energy-related endeavors, giving those in the energy industry the opportunity to give back.

With your help, since 2002, the CFEBA has provided support to various energy related programs focused on improving lives worldwide including:

- electric distribution system that brought electricity to approximately 461 families in rural Bolivia
- replace one of the seven air conditioning units on the roof of a high quality, low cost health care and human services center in Boston, MA
- solar panels and solar water pump to that gave 4,600 people in Uganda access to clean water for the first time
- funds to defray the energy-related costs needed to assist and supply food to Hurricane Dorian victims in the Northern Bahamas
