

Editor's Page

This issue inaugurates the fifth year of publication of the *Energy Law Journal*.

Some statistics are appropriate. The *Journal* has published in its first four years 1,561 pages, 39 lead articles and notes, seven book reviews and 49 Federal Energy Bar Association Committee Reports. These issues of the *Journal* have included such diverse subjects as hydroelectric licensing, appellate venue, the adjustments process under the Natural Gas Policy Act, synthetic fuels, cogeneration, windfall profits tax, discovery before the FERC, oil allocation and pricing, oil pipeline regulation, coal conversion, competition in the electric utility industry, wheeling, PURPA, electric preference power marketing, enforcement at FERC, common carriage, indefinite price escalators, antitrust, LNG and flexible pricing.

The diversity, specificity and scope of these articles demonstrate two things: the capabilities and interests of our authors and the range of subjects covered by the distinct field of energy law. The *Journal* is proud to have published these articles and make them available to our almost 2,000 readers, some of whom are in western Europe and the Orient.

This issue recognizes with appreciation four years of excellent and dedicated service of Bill Penniman, who served as Editor of the Committee Reports. Bill's responsibilities will be assumed by Peter Kissel, who has served the *Journal* in other capacities and has prepared the cumulative index appearing in this issue.

The future of the *Journal* is dependent upon the continued support of authors, readers, and the Federal Bar Association. The *Journal* will attempt to meet the needs of its readership by serving as a timely and comprehensive record of energy law issues.
